SANITARY DESIGN

The mechanical design of the QuickSilver Platforms follows sanitary specifications for processing equipment developed by the AMI's Equipment Design Task Force. Every detail of the QuickSilver has been examined and designed to reduce the potential for colonization by harmful microbes, such as listeria monocytogenes and E. coli. All areas of this scale, within or near the critical food contact zone, can be cleaned to a microbial level. This product will improve sanitation audit scores and increase overall food safety in any facility.
